- LIV. Claim 74 is classified in class 455, subclass 456.1;
- LV. Claims 75 and 76 are unsearchable.

The inventions are distinct, each from the other because of the following reasons:

3. All of the claimed Inventions are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the claims are written in independent fashion, each directed toward various

features toward one or more aspects of the instant invention(s). Features for locks for any of cars, laptops, bicycles, people, animals, plants, currency, cell phones, etc. are claimed separately, with no indication given as to why a feature useful for one aspect of the invention would have any utility in another aspect of the invention.

4. Further regarding Invention I above, those claims are unclassifiable because they comprise multiple inventions – e.g. claim 1 is directed to a “device” and a “process”, each for position location (class 340, subclass 988) and theft-prevention (class 726, subclass 35); the other claims in this Invention are similarly flawed. In any case, the need to search such a wide swath of classifications would present an undue burden on the Examiner, and therefore restriction is required.

5. Further regarding Invention LV, the claimed subject matter is the *patent rights itself*. “Patent rights” are not statutory subject matter, as one cannot patent a patent; consequently no classification is possible for the claims, rendering the claims unsearchable.
